DETAILED ACTION

1. The Amendment and Petition for Time Extension filed by Applicant on 07/10/2007 has been entered.

2. Claim 28 has been canceled.

3. New claim 43 has been added.

Response to Amendment/Arguments

4. Applicant's amendment and arguments filed on 03/12/02 have been fully considered and they are found persuasive.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1713

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Resendes, U.S. Patent No. 6,706,804 (hereinafter "Resendes") in combination with Cruse et al., U.S. Patent No. 6,608,125 (hereinafter "Cruse"). Resendes teaches a filled halobutyl elastomer comprising a bromobutyl elastomer, silica and a silazane compound. See Resendes, Abstract; col. 1, line 49 through col. 2, line 56. Resendes differs from the present invention in that the present invention requires a protected thiol modifier. Cruse teaches in analogous art a block mercaptosilane-coupling agents for filled rubbers. See Cruse, Abstract; col. 2, lines 22-53. In view of Cruse, one having an ordinary skill in the art would be motivated to modify Resendes by using an block mercaptosilane-coupling agents in the filled rubber composition. Such modification would be obvious

Art Unit: 1713

because one would expect that the use of a filled rubber composition as taught by Resendes to be similarly useful and applicable to the filled rubber composition taught in Cruse. The two references are not only both directed to rubber compositions but also are both directed to filled rubber composition with silicon-based additives.

8. Applicants contend Cruse fail to cure the deficiency of Resendes because Cruse fails to teach or suggest the use of halobutyl elastomers in combination with protected with protected thiol modifiers. This is an incorrect motivational analysis. The halobutyl elastomer is not a deficiency in Resendes and as stated by the Examiner the motivation arises out of both references being direct to silica filled compositions.
